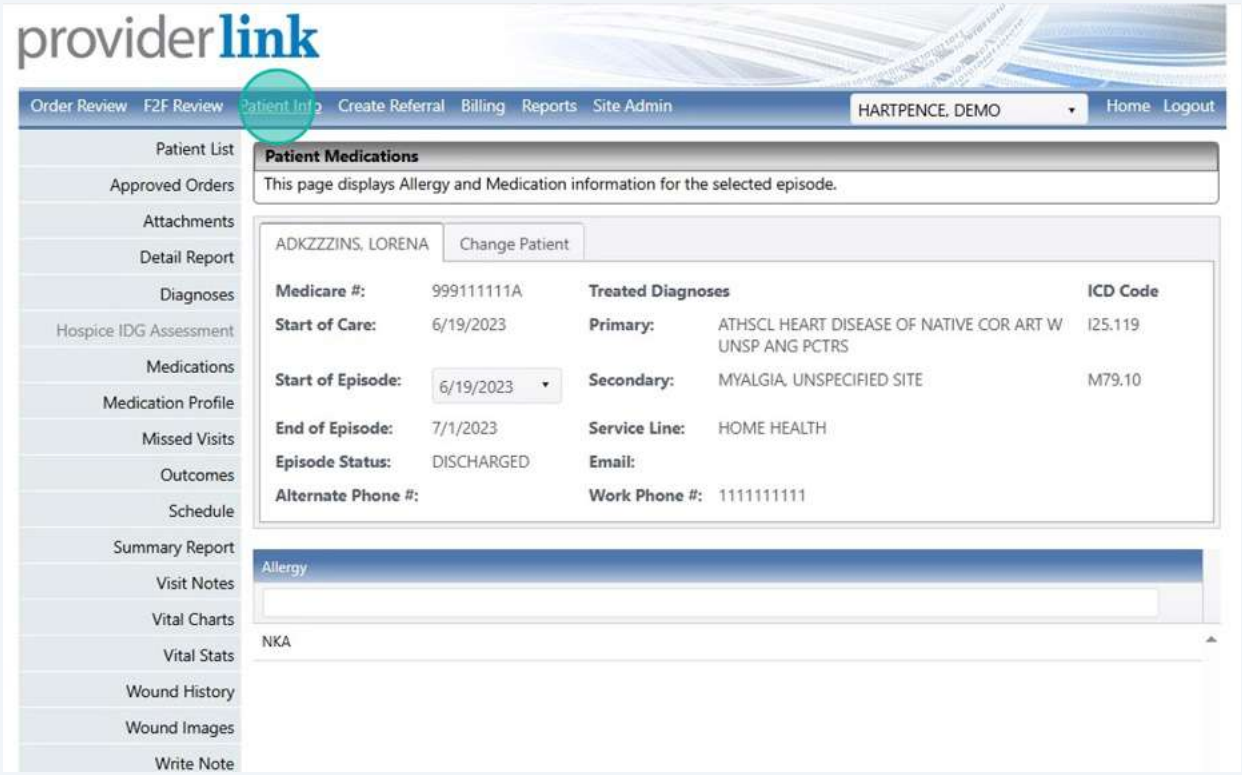
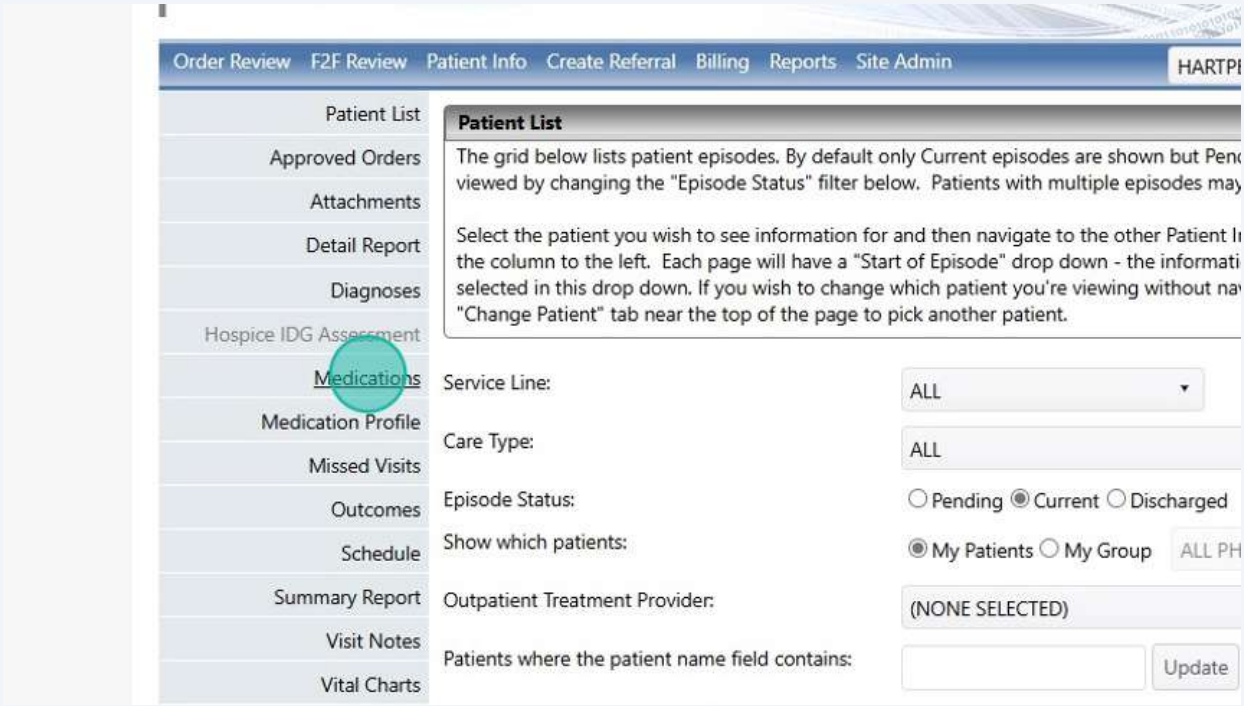
Provider Link: How to View Medications and Med Profile

This feature allows providers to view a patient's current medications and access the detailed Medication Profile for clinical review.

1 Once in Provider Link, navigate to the *Patient Info* tab. If needed, you can select the patient from the Patient List before proceeding.

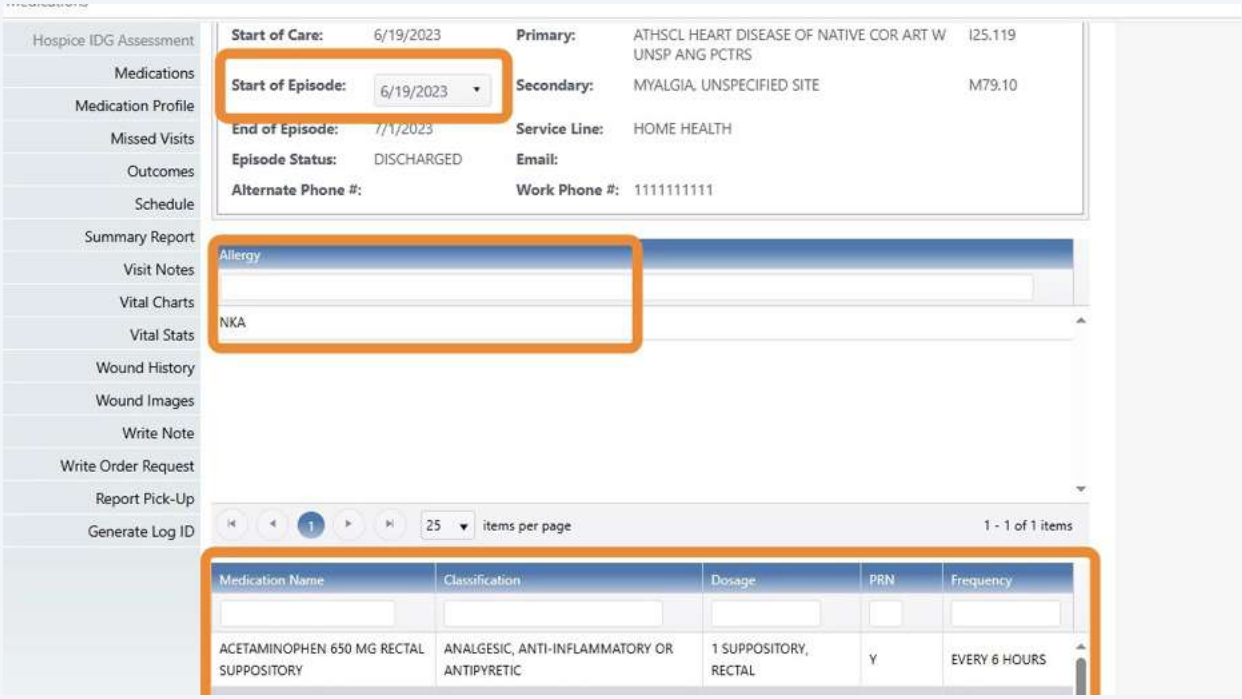


2 Click on the Medications tab in the gray column.

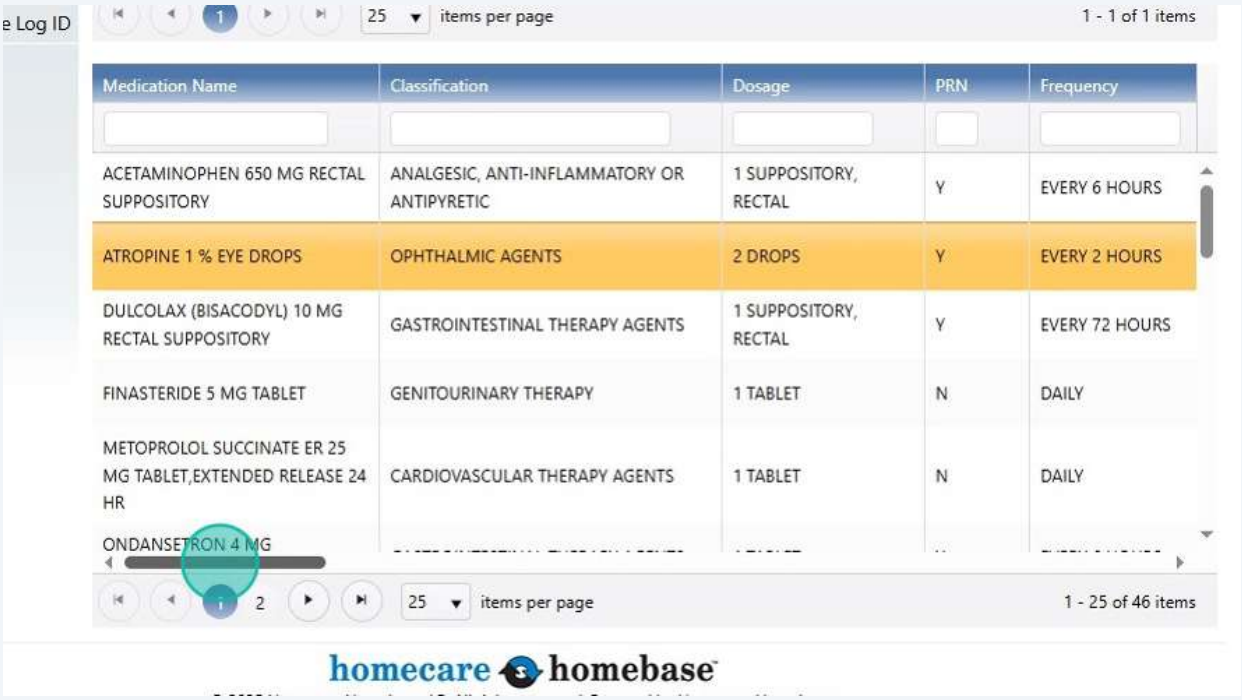


3 From this screen, you can change the episode date if needed, view allergy information, and review the patient's current medications listed below.

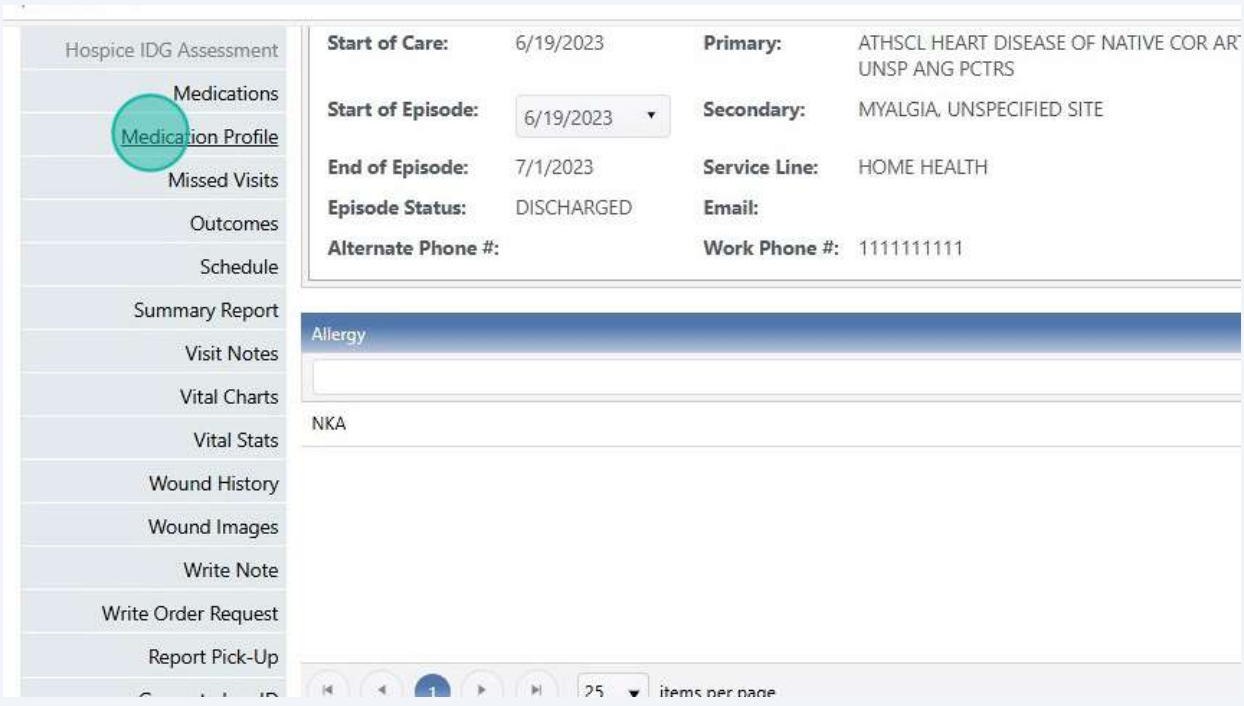
As with all of these views you can change the patient as well.



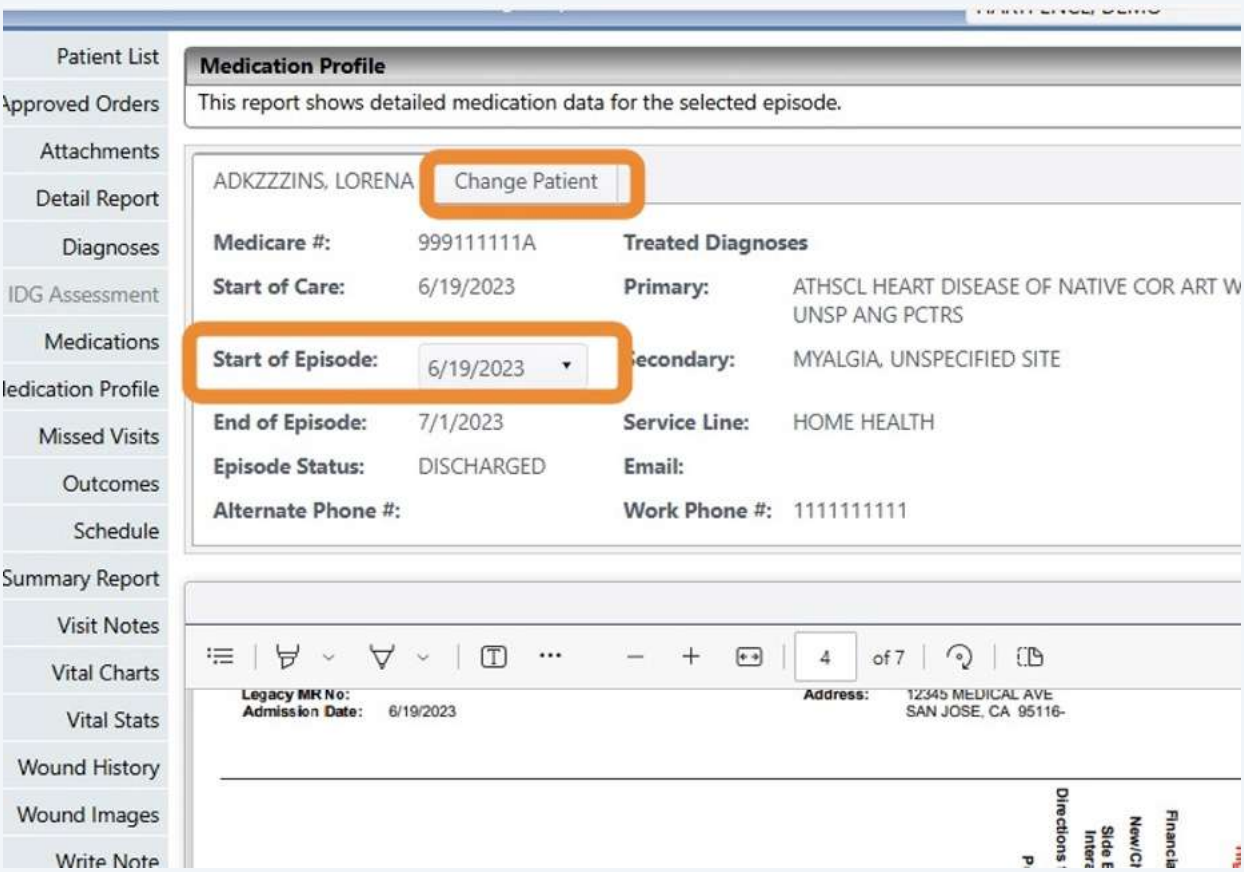
4 In the Medications section, you can use the scroll bar to view detailed information about each medication. Such as medication class, dosage, PRN status, frequency, route of administration, and more.



5 The provider can also view the Medication Profile by selecting that option from the gray navigation column on the side.

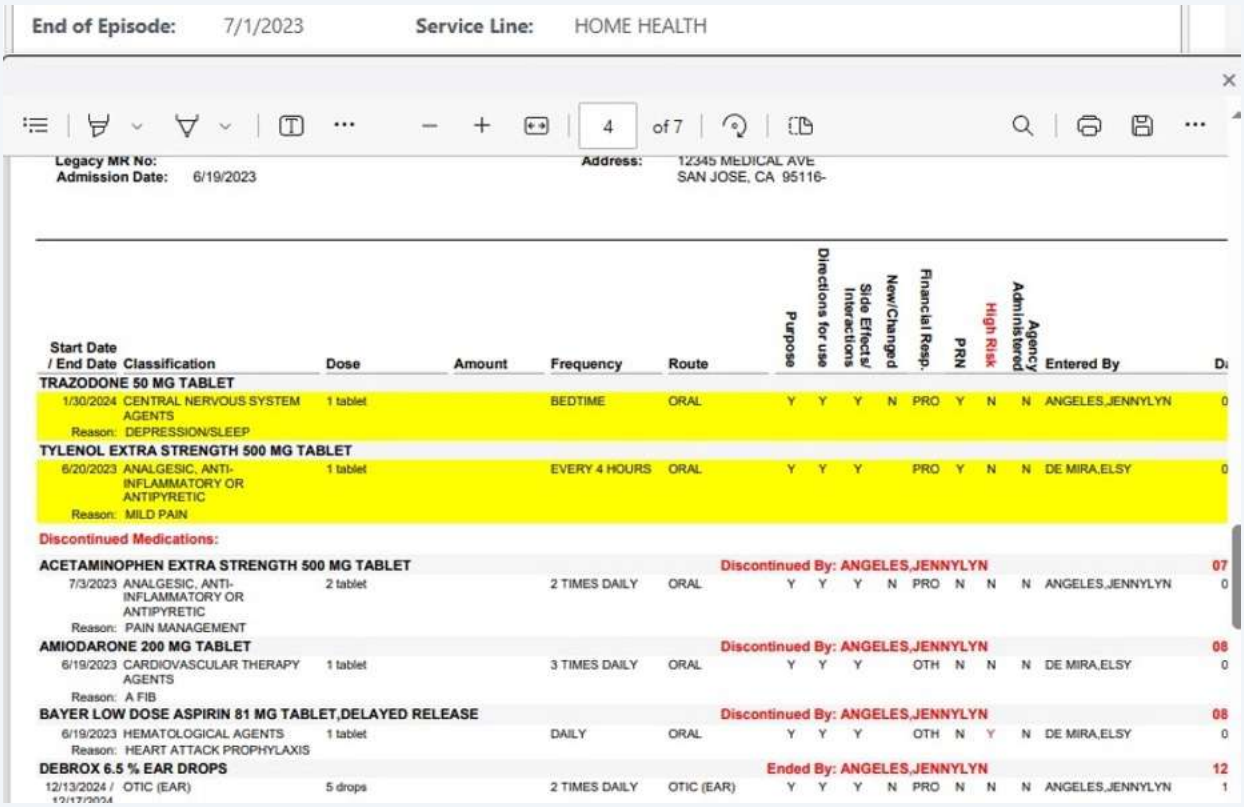


6 Here, the provider can view basic patient information, switch to a different episode if needed, or select a different patient altogether.



7 Below, the Medication Profile will populate, displaying detailed information about each medication the patient is currently taking. Yellow meds are PRN, red are discontinued.

This helps providers ensure medication safety, check for potential interactions, and verify alignment with the patient's treatment plan. Reviewing this section supports informed clinical decisions and continuity of care.



End of Episode: 7/1/2023 **Service Line:** HOME HEALTH
